

**GENERAL INFO**

**DESIGNED FOR BEVERAGE SERVICE EQUIPMENT**

**Sanitising Cleaner Refillable Cartridge, 10"**

BevClean™ uses active oxygen to remove fermentation residue, protein, colour and organic soil and has a high kill rate on a wide range of microorganisms making it an effective sanitiser as well as cleaner. This is a fantastic product for use on all beverage applications including beverage delivery lines, brewery equipment, premix equipment, pots, fermenters, heat exchangers and coffee heads.

**HOW TO SANITISE A SYSTEM USING BEVCLEAN™**

This cartridge contains 500g of BevClean sanitising cleaner which will sanitise 30 metres of cold/soda water line. The cartridge will clean and sanitise systems with up to 4 outlets; for larger systems the cartridge can be refilled and the process repeated for up to 80 metres of line each refill.

1. Before using BevClean™ to clean and sanitise your beverage delivery lines flush the lines with water until the water runs clear.
2. Install cartridge in any standard water filter housing (10" x 2.5" cartridge size).
3. Connect water line and open any closed shut-off valves to allow water to flow through the housing and cartridge.
4. Open one tap at a time for 1 minute each(500 mL will clean 4 outlets).
  - a. Collect a small sample of water from each tap and use the supplied test strips to test the water (follow the directions supplied with the test strips).
  - b. Each test strip should change to a black or blue colour after 30 seconds.
5. Leave all outlets off and let the system deep clean for 15 minutes.
6. Open all outlets and run water for 10 minutes.
7. Uninstall the cartridge from the filter housing.
8. Open all outlets and run water to flush the line for 10 minutes
9. Collect a small sample of water from each tap and retest the water.
  - a. The test strip will be light blue-green or white to indicate the level in the water is within drinking water guidelines.
  - b. If the test strip still changes to a dark blue colour repeat steps 8 and 9.
